SUMMARY

Backend Engineer with 2.10 years building distributed, cloud-native microservices. Experienced across Java, Spring Boot, Azure, Kubernetes to deliver secure, scalable, and high-availability backend systems.

SKILLS

Languages: Java, Python, JavaScript, SQL
Frameworks: Spring Boot, Spring Security, FastAPI, React JS
Cloud & DevOps: AWS (EC2, S3, IAM), Azure, Docker, Kubernetes, Git, CI/CD (GitHub Actions, Jenkins)
Architecture: Distributed Systems, System Design, REST APIs, Generative AI
ORM & Testing: JPA, Hibernate, Maven, TDD, JUnit, Mockito, JMeter, SonarQube, Checkmarx, Grafana
Databases and Messaging: MySQL, MongoDB, Redis, Apache Kafka

EXPERIENCE

Software Developer

August, 2023 – Present

TVS Motor Company

Bengaluru, India

- Architected high-throughput RESTful microservices using Spring Boot, handling **3,000+** Requests Per Second (RPS) with 99.9% uptime and **sub-200ms p95 latency**.
- Developed LMS data models, entity diagrams, and core API contracts that enabled the team to replace a **\$130K vendor** and scale to **100K+** monthly requests across **24 countries**.
- Designed and implemented secure OAuth2-based authentication APIs using Azure B2C and Spring Security, enabling seamless access for **10K+** users with zero security incidents.
- Containerized UMS for **Azure Kubernetes Services (AKS)** migration, optimizing API performance under **3x traffic** spikes and reducing infrastructure costs by **25%**.
- Engineered event-driven microservices using Azure Service Bus for asynchronous API communication, achieving **99.9%** message reliability and improved system scalability.
- Optimized test coverage from **62%** to **88%** using JUnit, Mockito, and SonarQube static analysis integration, reducing critical defects by 40% and eliminating Q3 2025 production incidents.
- Led a **Proof of Concept (POC)** for Azure Face API liveness detection, integrating it into production and reducing fraud attempts by **60%**.
- Enhanced system observability by monitoring application logs via AKS pod logs, tracking API health using Site24x7, and visualizing system metrics with Grafana, reducing incident resolution time by **30%**.

Software Developer Intern

April, 2022 – June, 2022

MyEra

Remote

- Developed **ReactJS** components for user authentication flows, implementing form validation and secure session handling on the frontend.

PROJECTS

Event-Driven Notification System

[Github](#)

- Designed an event-driven notification system using **Kafka** and **Spring Boot**, enabling parallel event processing via partitions and consumer groups.
- Improved system reliability by implementing Kafka retry logic and **Dead Letter Queue (DLQ)** for failed event handling and **fault-tolerant** message processing.

BookWise

[Github](#)

- Engineered a server-rendered library management system with secure authentication and role-based authorization using **Spring Security**, custom **UserDetailsService**, and **BCrypt** password hashing.

ACHIEVEMENTS

Solved **500+ DSA problems** on competitive programming platforms, demonstrating algorithmic excellence.

Mentored 2 engineers on **system design, observability, and scalable microservice architecture**.

EDUCATION

Shiv Nadar Institute of Eminence

July, 2019 – May, 2023

Bachelor of Engineering in Mechanical, Minor in Computer Science

Delhi NCR, India
